

GPS Tracking

GPS tracking for vehicles, workers and assets

Vestige AVL/GPS tracking operates through a cloud-based portal and a wide range of tracking devices built for multiple use cases.

The system enables real-time fleet monitoring to improve:

- Field productivity
- Dispatch efficiency
- Safety and accountability
- Fuel consumption management
- Overall operational visibility

Vestige offers commercial-grade GPS trackers, including:

- Hardwired devices installed directly in vehicles
- Plug-and-play OBD-II devices for simple installation

Additional options include:

- Lower-frequency trackers for non-critical monitoring
- Weather-proof asset tracking devices for outdoor or rugged environments

vestigeview.com

Provides a comprehensive suite of GPS tracking services, including:

- Near real-time device location
- Configurable reporting frequencies
- Full tracking history
- Event and alert notifications
- Customizable reports with subscription options
- User management tools

The Vestige cloud-based web portal features:

- Google Maps integration for the most up-to-date mapping data
- GIS compatibility using Web Map Service (WMS) layers to display custom geographic data

Proven and deployed across a range of sectors, including:

- Municipal fleets
- State DOT districts
- Police, fire, and EMS agencies
- Non-emergency medical transport organizations
- Other public and private fleet operations
- Long haul trucking & Logistics
- Logging, towing/recovering & field services
